

## **KDG HK RAIL INSTALLATION INSTRUCTIONS**

Applies to all HK 416/417 varients

**DIFFICULTY LEVEL: 1/10** 

## TOOLS NEEDED FOR INSTALLATION

- 1. Large flat-head screwdriver
- 2. Soft mallet (i.e. leather or rubber) or...or a piece of wood and a hammer
- 3. Gun lube (doesn't matter what kind so long as its wet and slippery)
- 4. Driver to remove OEM rail
- 5. Blue Loctite (or equivalent)

## REMOVAL INSTRUCTIONS

- 1. Safely make sure your firearm is unloaded and all ammo away from the work space.
- 2. Remove OEM rail fastener(s) under the rail, near the receiver pivot pin.
- 3. Slide OEM rail off barrel nut.

## INSTALLATION INSTRUCTIONS

- 1. Apply a small amount of gun lube around the OEM barrel nut.
- 2. Slide KDG rail onto oiled barrel nut.
- 3. Gently tap KDG rail into the OEM barrel nut using a soft mallet until seated.
- 4. Add a drop of blue loctite to the included fastener(s) and install.

Torque Spec: Do not exceed 60 in/lb. (Tight is tight, be smart & use good judgment)
